

# AUTOMATIC VEHICLE LOCATION AND MOBILE DATA SYSTEMS

## FOR UTILITY/PUBLIC WORKS FLEETS

Automatic Vehicle Location (AVL) systems are quickly becoming necessary operational tools for Utility and Public Works agencies. By providing real-time location and status information of your vehicles, an AVL and Mobile Data system will give you streamlined operations and much improved safety for your personnel and vehicle fleet.

The key features and benefits of the RSI AVL system revolve around the wireless transmission of data between the vehicles and your dispatch. From a basic AVL system you will have real-time location, speed, heading, and status data for your entire fleet. Various system options can equip your fleet with Mobile Data Terminals or Laptop Computers in the vehicles providing a wide variety of additional functionality when fully integrated to a third party dispatch or work order management program.

Listed are some of the key features of the RSI AVL system:

- GPS Vehicle Tracking
- Customized Mobile Data Applications
- Dispatch/Work Order Integration (any vendor)
- Customized driver, vehicle, activity reports
- In-vehicle sensor/device integration (device, plow, broom, doors, etc.)
- Use any type of communication (2-way radio, cellular, GPRS, etc.)
- Emergency Panic Buttons

# MOBILE DATA SOLUTIONS

## DISPATCH AND WORK ORDER SYSTEM INTEGRATION

The RSI AVL and Mobile Data system is designed to be fully integrated to third party systems such as Work Order and Computer Aided Dispatch programs. The RSI AVL system and V-Track™ mobile unit act as a wireless gateway between the base and optional mobile data terminal or computer in the vehicle.

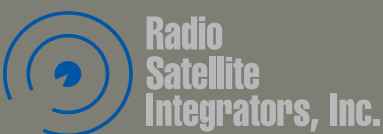

This allows the driver access to a variety of information which can include:

- Messaging (status and text)
- Dispatch and work orders
- Mapping and Navigation

TEXT ONLY OPTION

RSI has extensive experience providing AVL and Mobile Data systems for all types of utility and public works fleets. See our website for a current list of utility and public works customers.
